Child Care Works Reminders

Summer Schedule Changes

If your child's childcare arrangements have changed for the summer (new provider, change in hours, no longer needing care) please remember to notify the ELRC of these changes. You can reach out to your ELRC Family Specialist with any updates or questions.

The ELRC will also need to be notified if your child(ren) will not be in care due to a vacation for 5 or more consecutive days.

Children receiving CCW funding are allowed up to 40 days of absence a year and they reset every year on 7/1. Please note that absences can accumulate quickly, especially over the summer months if you do not send your children on their scheduled days for care.

Clothing Truck

Catholic Social Services will be holding a clothing drive on Tuesday, July 21st from 9:30-11:30AM at 100 N Wilkes Barre Blvd, Wilkes Barre. This event is open to the public and they will be offering men's and women's clothing.

-

Food & Fun in the Park

The YMCA is offering fun and food in the park Monday through Friday 10am-2pm from June 29-August 21. Lunch will be served from 11:30am-12:30pm. Free for any child from kindergarten through 12th grade while supplies last. See attached flyer for locations in Wilkes-Barre, Duryea and Luzerne.

- Click [here](#) for the flyer

Hazleton Area Children's Festival

Hazleton Area Children's Festival will be held this year on Sunday, August 30th from 11am-6pm at the Hazle Township Community Park. There will be free activities for children, food vendors, a scavenger hunt and fireworks. See attached flyer for more information.

Community Mental Health Survey

Please take a moment to complete this important survey. Maternal Health and Family Services designed this survey to gather valuable insights on maternal health experiences, needs, and barriers to care. The information collected will help make new plans, develop more resources, and strengthen our impact across Northeastern Pennsylvania

Parenting Corner

Rapid Response Team

Rapid Response Team is a short-term intervention designed to support children who may be experiencing challenging behaviors in the early learning setting. This team observes the child at the child care facility and will offer strategies to the teacher and parent. If appropriate, referrals to community resources and services are shared with the family and provider as well.

If you have concerns that your child may be suspended or expelled from child care and could benefit from the Rapid Response Team supports, you can begin the referral process here: [RRT Referral](#)
(This program does require parental and provider consent)

DID YOU KNOW?

Children who read succeed!
They are better behaved, have
better school attendance, feel
more confident and capable in
school.

Bathing Suit Colors Matter!

Keep your child safe in the water by choosing the right bathing suit colors that stand out in the water. Bright, neon colors like pink, orange, yellow, and green are easiest to spot in the water. Since these colors aren't typically part of the normal environment, they stand out against dark color water or blue pool liners and are easier to spot. Muted colors blend with the water, so avoid shades of dark blue, green, white, and pastels.

Take a look at this chart to see which colors blend and which ones stand out.

Parent Project Podcast

Community Services for Children has been hosting the Parent Project Podcast to engage families in areas of common concern for parents. Experts provide perspectives on topics of health & safety, mental health, child transition, and other important subjects.

This month, we are joined by Missy Wise, Assistant Director of United Way Training Initiatives. She discusses the topic of De-escalation and Regulation. Click [here](#) to listen.

Child Development

Summer Learning Happens Everywhere

Summer is a wonderful time for children to explore, play, and learn. While school may be on break, young children continue developing important skills every day through everyday experiences with the people who love them most.

The best part? Learning doesn't require expensive toys or carefully planned activities. Some of the most meaningful learning happens during simple family moments.

Here are a few easy ways to support your child's development this summer:

Explore Nature Together

Take a walk around your neighborhood, visit a local park, or simply spend time in your backyard. Encourage your child to notice colors, shapes, insects, birds, flowers, and clouds. Ask open-ended questions like, "What do you think that bug is doing?" or "How many different leaves can we find?" These conversations build language, observation, and critical thinking skills.

Read Every Day

Reading for just 15–20 minutes each day helps children build vocabulary, strengthen listening skills, and develop a lifelong love of books. Visit your local library to discover free story times and borrow new books to enjoy together.

Get Creative

Sidewalk chalk, finger painting, water painting with a brush, homemade playdough, or recycled materials can inspire hours of imaginative play. Creative activities help children strengthen fine motor skills, problem-solving abilities, and self-expression.

Water Play Builds Skills

A bucket of water, measuring cups, funnels, and sponges can become an exciting science and math activity. Children learn about pouring, measuring, floating, sinking, and cause-and-effect while staying cool on hot summer days.

Cook Together

Invite your child to wash fruits and vegetables, stir ingredients, count scoops, or help set the table. Cooking builds math skills, language development, independence, and healthy eating habits.

Make Time to Talk

Conversations are one of the most powerful ways children learn. Talk about your day, ask questions, listen to your child's ideas, and encourage storytelling. These simple interactions build confidence, communication skills, and strong family relationships.

Most importantly, remember that children learn best through play, exploration, and positive relationships. Your time, attention, and encouragement are the greatest gifts you can give your child this summer.

How to Protect Yourself and Family from the Sun

In the month of July, we spend most of our day outside in the beautiful sunny weather. It is very important to protect your skin and eyes from the UVA and UVB rays from the sun. Everyone exposed to the sun, especially children, should wear sunscreen, making sure that it is "broad spectrum," water resilient, and has an SPF of 30 or higher. It is not recommended for infants under 6 months old to wear sunscreen, but it can be applied to their face and small areas of the body when shade and protective clothing are not available.

Below are some sunscreen tips:

- Use enough sunscreen to cover all exposed areas- especially the face, nose, ears, feet, hands, and the back of the knees.
- Apply sunscreen 15-30 minutes before going outside so that it absorbs into the skin.
- Use sunscreen any time you are outside, even on cloudy days.
- Reapply sunscreen every 2 hours and after swimming, sweating, or drying off with a towel and apply generously.

Other ways to protect yourself from the sun:

- wear hats

- wear cool, sun protective clothing
- stay in the shade
- avoid being outside between 10 am and 3 pm, when the sun's rays are the strongest is also recommended.
- protect your eyes from the sun's UV rays by wearing sunglasses with at least 99% UV protection.

In case of a sunburn:

- replace the lost fluids with milk or water
- use cool water on the skin to soothe
- use pain medications
- keep your child out of the sun until the sunburn is healed.
- call your doctor if a baby under 1 year old gets a sunburn or if older children develop blisters, pain, or a fever.

Remember, UV rays are the strongest in the summer, so it is very important for you and your children to stay protected. Click [here](#) for more helpful information on keeping you safe in the sun.

Finding a Dentist

Did you know that tooth decay is the number one chronic disease for children but can be prevented and managed with good oral care? Oral care starts during pregnancy, and dental visits should begin by a child's 1st birthday.

For help finding a dentist use the following links:

Family Engagement

Look at the Sky in July

A great family activity in the summer is stargazing. It is amazing what you can see and learn just from looking up! Whether you live in the city or the country, you have a chance to see incredible and breathtaking occurrences in the sky as a fun, free, and fascinating family activity.

Here are some phenomenal events happening in July in our night sky:

July 17th

Planetary Parade

Six planets will create a Planetary Parade in the night sky if you look west right at sunset. You will be able to see Venus and Jupiter with the naked eye; Mercury will be visible near the horizon. Saturn, famous for its rings, can be seen without optical equipment. Uranus and Neptune will be considerably fainter and will require some kind of special equipment.

This occurrence, called the Planetary Parade, happens because the planets travel around the Sun on paths that are relatively close to the same flat plane. As they move through their orbits, there are occasions when several of them appear clustered along the same region of the sky when viewed from Earth. *Credit:*

July 17th – August 24th

Perseids Meteor Shower

The most popular meteor shower peaks in August, however you can also see them in late July. The Perseids are particles released from comet 109P/Swift-Tuttle during numerous returns to the inner solar system. You can see them around the area of the constellation Perseus the hero. Meteor showers are a celestial event where Earth passes through the dusty debris left behind by a comet or asteroid. As these tiny space rocks slam into Earth's atmosphere they burn up, creating bright streaks of light across the night sky or what we call "shooting stars."

Credit: [American Meteor Society](#)

Stargazing Tips:

Visit your local library and check out books about stargazing to prepare and to educate yourself and your child(ren). You can also visit [NASA](#) or search for "celestial events."

Try to get away from light pollution and find a dark place. Also let your eyes adjust for at least 20-30 minutes before trying to view the night sky. You can use a telescope or binoculars to enhance your viewing. Remember, you need clear skies with little to no clouds.
